Professional Summary

Frontend-focused Full Stack Engineer with production experience delivering enterprise-grade **React** applications across ERP and CRM platforms, and **Next.js** GenAI applications in personal projects. Sole frontend architect on a multimodule ERP suite; designed the shared component design system adopted as the canonical UI layer organization-wide, with expertise in **React reconciliation**, **Core Web Vitals** (**LCP**, **CLS**, **INP**), and **unidirectional data flow** architecture.

Experience

Eazy ERP

Software Developer

Gurgaon, India

Mar 2024 – Present

- Frontend Architecture:** Sole frontend architect on Eazy Cockpit: designed **component boundary hierarchies** grounded in **React Fiber's reconciliation model** and **virtual DOM diffing**, and eliminated prop drilling via **Context API composition** and **unidirectional data flow** across ERP, CRM, and Licensing modules.
- Component Design System:** Engineered a **React** and **JavaScript** component design system with **compound component patterns**, **custom hook abstractions**, and **CSS custom property** design token propagation; integrated **Syncfusion** components for complex data grids and charts, with **WCAG 2.1** and **ARIA role** compliance: adopted as the authoritative UI layer across multiple product teams.
- Core Web Vitals & Render Performance:** Overhauled analytics dashboards targeting **LCP**, **CLS**, and **INP**: applied **React.memo**, **useTransition**, **useDeferredValue**, **code splitting via React.lazy**, **dynamic imports**, and **windowed list virtualization** to eliminate cascade re-render cycles on high density enterprise data views.
- CRM & Access Control:** Delivered **Eazy CRM** end to end: architected **drag and drop** lead management pipelines with **optimistic UI mutations**, **Recharts** SVG funnel visualizations, and dashboards with **React Hook Form** and **Zod schema validation**; engineered **route scoped RBAC** with **permission aware conditional rendering** and **Express JWT middleware** enforcement across all user tiers.
- State Architecture & Data Fetching:** Enforced **client and server state separation** across modules: **Redux Toolkit** for global UI state with **normalized slice architecture** and **React Query** for **server state synchronization** with **stale-while-revalidate caching**, **optimistic mutations**, and **background refetching**: eliminating redundant API calls and ensuring **cache coherence** across concurrent user sessions.
- Production Debugging:** Diagnosed and resolved **stale closure antipatterns**, **async race conditions**, and **React state corruption** in ManageDMS: applied **useEffect dependency auditing**, **AbortController** based request cancellation, and **ref-based escape hatches** to restore critical user journeys and unblock extended stalled feature delivery on the module.
- CI/CD & Quality Engineering:** Established **GitHub Actions** pipeline spanning **ESLint and Prettier** static analysis, **Jest and React Testing Library** component validation, **Vite** build optimization with **tree shaking** and **chunk splitting**, and **progressive staged deployment** across staging and production, enforcing mandatory quality gates on every pull request.
- Recognition:** Awarded **Top 20 Gold Club Achiever** at Eazy ERP, selected company-wide across all departments for outstanding performance and contribution.

Technical Skills Profile

Languages	JavaScript ES2024, TypeScript (personal projects), HTML5, CSS3, C++
Frontend Engineering	Virtual DOM Reconciliation, Component Lifecycle Optimization, Unidirectional Data Flow
React & Styling	React.js, Next.js App Router, Redux Toolkit, React Query, React Hook Form, Zod, TailwindCSS, ShadcnUI, Radix UI
Backend & Databases	Node.js, Express.js, REST APIs, WebSockets, Clerk Auth, JWT, Redis, PostgreSQL, Prisma ORM, MongoDB, MySQL
DevOps & AI	GitHub Actions CI/CD, Vercel, Git, Jest, LangChain, RAG Pipelines, Gemini API, Pinecone

Education

9.10/10	Bachelor of Technology, Computer Science Engineering , <i>Prestige Institute of Engineering Management and Research</i> Indore, India	2019 – 2023
---------	--	-------------

Projects

MedDoc AI: RAG Based Clinical Document Assistant | github | link

Next.js · LangChain · Gemini · Prisma · PostgreSQL · Clerk · Zod · ShadcnUI

- Architected a **Next.js App Router** streaming chat interface with **React Suspense boundaries**, **SSE** for progressive content disclosure, and **React Dropzone** file ingestion over a **LangChain and Gemini** retrieval augmented generation pipeline delivering source cited clinical answers.
- Designed a **multiagent extraction pipeline** for clinical entity normalization on **Prisma and PostgreSQL** with **Row Level Security** and full audit logging; secured via **Clerk**, **Zod schema validation**, and **+++protected Server Actions**; composed with **ShadcnUI**, **Radix UI** and **TailwindCSS** dark mode theming.

StyleGenie: AI Wardrobe Organizer | github | link

Next.js · Express · Prisma · PostgreSQL · Gemini AI · TanStack Query · Zustand · ShadcnUI · Razorpay

- Built and deployed **StyleGenie**, a full-stack AI wardrobe organizer using **Next.js**, **Express**, **Prisma**, and **PostgreSQL on Neon**: integrated **Google Gemini AI** for clothing detection from pile photos, personalized outfit suggestions, and real-time style critique; deployed on **Vercel and Render** with **Cloudinary** image hosting and **JWT httpOnly-cookie auth** across cross-origin domains.
- Implemented 13+ feature pages including AI-generated daily outfits, **cost-per-wear analytics** with **Recharts**, outfit calendar planning, packing list generation, and **Razorpay-powered tiered subscriptions** (Free, Pro, Enterprise): using **TanStack Query** for server state, **Zustand** with persist middleware for auth state, and **shadcn/ui with Tailwind** for a fully responsive design system.
